Day 4 - Building Dynamic Frontend Components for Your Marketplace

Objective:

On Day 4, I focused on designing and developing dynamic frontend components to display marketplace data fetched from **Sanity CMS** or APIs. This step emphasized modular, reusable component design and real-world practices for building scalable and responsive web applications.

Key Learning Outcomes:

- **Building Dynamic Frontend Components:** I created components that fetch and display dynamic data from Sanity CMS or APIs, ensuring they can be reused and scaled for future growth.

- **Responsive Design:** Ensured that the components were responsive and worked seamlessly on both desktop and mobile devices, following best practices for UX/UI.

- **State Management:** Applied state management techniques for handling data and ensuring a smooth user experience when interacting with the marketplace.

- **Professional Workflow:** Prepared for real-world client projects by following professional workflows for building dynamic and scalable frontend components.

Key Components Built:

1. Product Listing Component:

- **Objective:** Render product data dynamically in a grid layout.

- **Features:**

  - Displayed key fields such as Product Name, Price, and Image.

  - Fetched data from Sanity CMS using **Next.js** and dynamically populated the grid layout with the products.

2. Product Detail Component:

- **Objective:** Created individual product detail pages using dynamic routing in **Next.js**.

- **Features:**

  - Included detailed product information like Description, Price, and Available Sizes or Colors.

  - Each product had its own dynamic route, fetched from Sanity CMS.

3. Checkout Flow Component:

- **Objective:** Created a multi-step form for checkout.

- **Features:**

    - Included fields for billing and shipping address.

    - Mock implementation for payment details to simulate the checkout process.

4. Footer and Header Components:

- **Objective:** Built consistent navigation and branding elements.

- **Features:**

    - Added links to key pages (Home, About, Contact) to provide smooth navigation.

    - Ensured the footer and header were responsive and accessible.

5. Notifications Component:

- **Objective:** Display real-time alerts for user actions.

- **Features:**

    - Used toast notifications or modal windows to show alerts for actions like adding to cart, errors, or successful purchases.

Steps Taken:

1. **Setup:**

   - Ensured that the **Next.js** project was connected to **Sanity CMS** for fetching product data.

   - Tested the data fetching process to confirm the availability of the required information.

2. **Building Components:**

   - Developed individual components for product listing, product details, checkout flow, footer, header, and notifications.

   - Focused on **modular and reusable components** to ensure the code could be easily extended in the future.

Expected Output:

By the end of Day 4, I achieved the following:

1. A fully functional **car listing page** displaying dynamic data from **Sanity CMS**.

2. Implemented individual **car detail pages** using dynamic routing in **Next.js**.

3. Implemented a search bar to filter **cars** by name or tags, enhancing the user experience.

4. Added additional features like **pagination** and **related cars** on the detail pages.

5. Ensured responsive styling to create a professional look across all devices.

6. Created modular components for scalability and future growth of the marketplace.

Skills Learned and Applied:

- **Dynamic Data Handling:** Fetching and displaying data from **Sanity CMS** or APIs and applying it within dynamic routes.

- **Component Modularity:** Designing reusable components for efficiency and scalability.

- **State Management:** Applied proper state management techniques to handle data and user actions.

- **Responsive Design:** Focused on creating a seamless experience across devices using best practices for UX/UI.

- **Professional Practices:** Replicated real-world client project workflows, preparing for future development projects.

```tsx
export async function getServerSideProps(context: GetServerSidePropsContext) {
  const { id } = context.params as { id: string }; // Type define kar diya for params
  const res = await fetch(`https://sanity-nextjs-application.vercel.app/api/hackathon/template7/${id}`);

  if (!res.ok) {
    return {
      notFound: true, // If API fails, show 404 page
    };
  }

  const car = await res.json();

  return {
    props: {
      car, // Pass car data to the component
    },
  };
}

export default function CarDetail({ car }: { car: { name: string; image: string; description: string; price: number } })
  return (
    <div className="w-full max-w-4xl mx-auto p-4">
      <h1 className="text-3xl font-bold">{car.name}</h1>
      <Image src={car.image} alt={car.name} width={600} height={400} />
      <p className="█text-gray-600">{car.description}</p>
      <p className="text-lg font-bold">Price: ${car.price}</p>
    </div>
  );
}
```

```tsx
1    import { useSearchParams } from 'next/navigation';
2    import Image from 'next/image';
3    import React, { useEffect, useState } from 'react';
4
5    // Define the CarData interface
6    interface CarData {
7      name: string | null;
8      type: string | null;
9      image: string | null;
10     fuelCapacity: string | null;
11     transmission: string | null;
12     capacity: string | null;
13     price: string | null;
14     originalPrice: string | null;
15   }
16
17   const CarDetails = () => {
18     const searchParams = useSearchParams(); // Fetch query parameters
19     const [carData, setCarData] = useState<CarData>({
20       name: null,
21       type: null,
22       image: null,
23       fuelCapacity: null,
24       transmission: null,
25       capacity: null,
26       price: null,
27       originalPrice: null,
28     });
29
30     useEffect(() => {
31       // Check if searchParams are available before updating state
32       if (searchParams) {
```

```tsx
17   const CarDetails = () => {
30     useEffect(() => {
31       // Check if searchParams are available before updating state
32       if (searchParams) {
33         setCarData({
34           name: searchParams.get('name'),
35           type: searchParams.get('type'),
36           image: searchParams.get('image'),
37           fuelCapacity: searchParams.get('fuelCapacity'),
38           transmission: searchParams.get('transmission'),
39           capacity: searchParams.get('capacity'),
40           price: searchParams.get('price'),
41           originalPrice: searchParams.get('originalPrice'),
42         });
43       }
44     }, [searchParams]);
45
46     const { name, image, price } = carData;
47
